+91 9032475086 • suryatejapathuri4@gmail.com • linkedin.com/in/suryateja-pathuri-997289406

- Over 11 + years of comprehensive experience in full-stack web development, project management.
- I have over 9+ years of specialized experience in developing user interfaces and web applications, utilizing technologies like HTML5, CSS3, JavaScript (ES5 and ES6), Typescript, Bootstrap, React JS, VueJS, Node JS, AJAX, JSON, Molecular JS, and various databases.
- Design and develop scalable backend applications using Java, Python, and microservices architecture.
- Build and maintain RESTful APIs and backend services for web and enterprise applications.
- Develop high-performance, secure, and reusable server-side components.
- Work with frameworks like Spring Boot, Hibernate, Flask, and FastAPI/Django.
- Experience integrating Artificial Intelligence and Generative AI solutions, including AI chatbots, prompt engineering, intelligent automation, and LLM-based applications using Python and modern AI platforms.
- Proficient in building Web User Interface (UI) with HTML5, CSS3, SASS, JavaScript, TypeScript, ES5, ES6, Node.js, Express.js, React.js/Redux, Vue.js, Next.js, Molecular.js, REST API Services, and AI-powered web applications.
- Expertise in the AWS Serverless ecosystem, including API Gateway, Lambda, DynamoDB, and cloud-based AI service integrations.
- Experience integrating Artificial Intelligence and Generative AI solutions, including AI chatbots, intelligent automation, prompt engineering, and LLM-based applications.
- Skilled in integrating AI APIs such as OpenAI GPT models into enterprise applications for conversational AI and content automation.
- Strong problem-solving skills with the ability to identify and resolve complex technical and AI integration issues.
- Deep understanding of industry best practices and standards for improving the quality attributes of web applications, including performance, maintainability, scalability, security, testability, and AI workflow optimization..
- Ability to analyze requirements and provide architectural guidance aligned with enterprise vision and AI transformation initiatives.
- Skilled in design principles and patterns for developing SPAs, including creating front-end architecture, technical design, AI-assisted workflows, and state management strategies.
- Experience across the entire software development life cycle, from discovery and requirement analysis to design, development, testing, deployment, and AI solution integration.
- Skilled in enhancing application performance, both in terms of initial load, rendering efficiency, and AI response optimization.
- Experience with server-side rendering for SEO and faster initial page load, as well as implementing complex solutions like static pre-renderers, dynamic re-rendering, and AI-driven personalization features.
- Skilled in conducting code reviews and suggesting best practices, design guidelines, industry standards, AI integration strategies, and scalable module implementations.
- Experience building intelligent systems using Python for AI automation, data processing, chatbot development, and backend AI integrations.
- Familiar with Retrieval-Augmented Generation (RAG), vector databases, semantic search, and AI-driven recommendation systems.

WORK EXPERIENCE

Neurealm (formerly GS Lab | GAVS)

02/2025 - Present

Senior Software Engineer (Full-Stack Developer)

As a Full-Stack Developer at Neurealm (formerly GS Lab | GAVS), I was involved in revamping the E-Commerce platform. Bringing in new features and improvements. We're currently in the process of moving to Next.js. This transformation is centered around the website, a vital platform for Advance Professional—a top automotive aftermarket supplier with a catalog of over 900,000 parts from trusted sources like Carquest Auto Parts, WORLDPAC, and Autopart International.

- Migration from Angular to adopting React JS and NextJS, enhancing website performance and better user experience.
- Provided support for production issues, lower environment concerns, data migration, and performance optimizations.
- Handled E Commerce IBM Websphere Espt configuration and Integration.
- Seamlessly incorporated new pricing features through effective A/B testing.
- Interact with the UX team and Implemented responsive web design, ensuring seamless experiences across devices.
- Presented a NextJS migration Proof of Concept, facilitating informed decision-making on the technology stack.
- Using terraform to create automated scripts to handle new relic alert and warning conditions.
- Integrate and consume APIs in the front-end application.
- Managed Jenkins for automated build and deployment, reducing errors and expediting release cycles.
- Designed and developed GraphQL APIs for scalable web applications.
- Built reusable GraphQL schemas, queries, mutations, and resolvers.
- Integrated GraphQL services with React, Angular, and Node.js applications.
- Optimize application performance, memory usage, and database queries.
- Collaborated with the analytics team for seamless integration of analytic data with Tealium and Google Analytics.
- Collaborated with the testing team, Scrum Master, and business analysts on issue tracking and story grooming for enhanced interactive development.
- Utilized JIRA for user stories and project progress tracking, promoting transparent project management.
- Review code implementations of Material-UI components.

Trianz

02/2025 - 08/2021

Technical Lead

PROJECT 1: Hayneedle (Walmart) – Website Migration and Enhancement At Walmart Inc., I played a pivotal role in the comprehensive overhaul of hayneedle.com, an online retail website specializing in furnishings and decor. This project involved a complete migration to a new and improved site experience, leveraging the Bulma framework and the latest ReactJS technology. PROJECT 2: GAP – Online Retail Checkout Experience Enhancement At GAP, I led a pivotal project aimed at enhancing the online retail experience for one of the world's foremost fashion retailers. Focused on checkout journey improvements and enhancements, the project aimed to elevate GAP's digital presence.

- Engaged in the full application development life cycle, actively participating in Scrum Agile methodology.
- Integrated Storybook to streamline UI component creation and documentation, implementing reusable patterns.
- Ensured seamless user experiences across devices, addressing breakpoints and layout shifts.
- Implemented and maintained an Atomic Design folder structure for enhanced collaboration and maintainability.
- Improved code quality using linting and SonarQube integration and prettier for code beautification.
- Provided ongoing support for existing page issues, ensuring site stability and functionality.
- Utilized Bamboo and Rancher for efficient application deployment, minimizing downtime.
- Implemented Lighthouse setup for monitoring performance indicators and meeting benchmarks.
- Understand and work with API documentation provided by the API team.
- Developed scalable backend applications using Java 8 and Python technologies.
- Built RESTful APIs and microservices using Spring Boot, Flask, and FastAPI.

- Implemented Java 8 features such as Lambda Expressions, Stream API, Functional Interfaces, and Optional.
- Implemented Micro Frontend architecture for bag and checkout UI, enhancing modularity.
- Implementing user interface (UI) designs and developing intuitive user experiences (UX) to ensure that the web applications are easy to use and accessible to all users.
- container and presentational folder structure in react
- Managed build and deployment using Jenkins in lower environments, reducing errors and expediting release cycles.
- Utilized New Relic for real-time performance insights and monitoring application behavior.
- Employed PagerDuty for incident management, enhancing team responsiveness and minimizing downtime.

Zensar Technologies

08/2015 - 02/2018

Lead Software Engineer

PROJECT 1: DWS HRMS Portal DWS2.0 ATL is an online HRMS portal. It is an internal gateway for a company's employees to access HR-related and other information about their workplace. It is built with microservice-based architecture. Each microservice runs in its own docker-container which enables more efficient use of system resources. The various services communicate using a central transporter called Redis. Multiple instances of the micro-services can run to support various load characteristics. PROJECT 2: Admin Portal (Optum) Dashboard helps the company to showcase all the customer related information in one single place so that the interaction should be very easy and flexible with Artificial and machine learning solutions. UI dashboard contains all the KPIs related information and dynamically renders the UI based on the customer info and showcases the last few summary of interactions.

- Involved in analysis, design and development and testing phases of the application development using Scrum Agile methodology.
- Involved in Sprint planning sessions and participated in the daily Agile Scrum meetings both internal and client side.
- Used the JIRA tool to track down the project progress, estimated time to complete, updating the requirements for user stories and creating the tickets for developing, testing and bugs.
- Design and created CRUD application using Moleculer.js, and PostgreSQL.
- Designed the back-end infrastructure and deployed the node instance as a Docker container in AWS.
- Worked closely with QA and UAT teams.
- Worked closely with the DevOps team in the complete deployment process.
- Introduced Swagger documentation to the team and created a smooth communication flow between the front-end and back-end teams.
- Designed and implemented container-based microservice architecture using Docker and Redis.
- Contributed to design and architectural discussions, proposing front-end architecture for future scalability.
- Developed reusable components and design patterns to ensure the application's scalability.
- Implemented responsive web design across mobile, tablet, and desktop devices, considering various breakpoints.
- Utilized data visualization libraries like d3.js to create charts for different Key Performance Indicators (KPIs).
- Employed Vue.js, Vuex for state management, Vuetify for UI components library.

EDUCATION

B TECH (Computer Science and Engineering .)

Vignan Institute of Information Tech. JNTU affiliated

AP, India • 05/2013

advanced diploma course on Real Time Embedded Systems and Linux Device Drivers

Cranes Varsity

Bangalore

AWARDS & SCHOLARSHIPS

Best Employee

Trianz

consistent and efficient Team Player

Zensar

championship in Badminton, Volleyball in engineering level and continuing the same in corporate internal sports

SKILLS

Front End: CSS3, ECMAScript, HTML5, JavaScript, SCSS, TypeScript

CSS frameworks: Bootstrap, Material Ui, Tailwind

UI Libraries/Frameworks: Angular, React.js, Vue.js

UI Component Libraries/Frameworks: AntD, Material UI, Vuetify

State management libraries: contextAPI, Redux, Vuex

Server Side Rendering: Next.js, Nuxt.js

Backend: Java (java 8, java 11, java 17), Microservices, Python, PHP

Server: Express.js, Molecular.js, Nest.js, Node.js, Rest Api's

Database: MongoDB, Mongoose, MySQL, PostgreSQL

Authentication/Authorization: JWT, OAuth, Passport.js

Testing frameworks: Cypress, Enzyme, Jasmine, Jest, Karma

IDE/HTML Editor: Eclipse IDE, Notepad++, Sublime, Visual Studio Code

Source/Version Control: BitBucket, Github, GitLab

Build Tools: Bazel, Gulp, Webpack

UI Dev Tools: React, Redux and Chrome Dev Tools

Server Tools: Postman, Swagger

Cloud Services: AWS, Azure, Google Cloud Platform

CI/CD: Azure DevOps, Jenkins

Web/App Servers: Apache Tomcat, HTTP Web Server

Project Management Tools: JIRA, Trello

Collaboration Tools: Microsoft Teams, Slack, Zoom

Operating Systems: Linux, Mac, Windows

Methodologies: Agile, Waterfall
